PROFESSIONAL SUMMARY

Computer Science and Statistics student with hands-on experience building production backend systems in Rust and SQL. Shipped a multi-tenant web application end-to-end — API design, authentication, role-based access control, and database modeling — for a live client using Axum, sqlx, and PostgreSQL, backed by prior work fine-tuning LLMs and building automation tooling.

WORK EXPERIENCE & INTERSHIPS

Sabaton Systems LLP, Bengaluru

Feb 2026 – May 2026

Software Developer (Intern)

- Built a multi-tenant regatta-management platform in Rust (Axum, SQLx, Askama) — 382 commits and 135 merged PRs across a 31.5k-line codebase — including a Racing Rules of Sailing compliant protest, hearing and appeals system covering the full RRS Part 5 and 70–71 lifecycle.
- Shipped a versioned Notice of Race / Sailing Instructions builder with in-process Typst PDF generation and an interactive Leaflet course designer, plus a transactional email system for registrations, invitations, OTP verification and document publication.
- Hardened the application for production — CSRF middleware, Argon2 hashing, HMAC-TOTP email verification, rate limiting and audit logging — and led a security audit that identified and fixed multiple IDOR vulnerabilities, alongside 421 tests and 65 database migrations.

Ernst & Young (EY), Bengaluru

May 2025 – Jun 2025

Technology Consulting Intern

- Built an internal tool that converts Business Requirement Documents (BRDs) into structured epics and user stories, reducing manual requirements-documentation effort for consulting teams.
- Fine-tuned open-source language models and integrated OpenAI APIs for document generation; evaluated output quality against consultant-written baselines and iterated on prompts and training data.

PROJECTS

Service Monitoring Toolkit for Regatta Manager | Python, Task Scheduler, SQLite

2026 (in progress)

- Polymorphic Probe class for HTTP/TCP checks; append-only CSV behind an atomic lock, per-run heartbeat distinguishing a stalled scheduler from a healthy service.
- Stdlib-only restartable ingestion into SQLite (byte-offset reads, deduplicated inserts); availability, p50/p95 latency and 5xx rates vs. a non-overlapping 7-day baseline.
- Alert state in SQLite — one alert on open, one on recovery, hourly reminders max, cutting 288 messages/day to a handful; daily Markdown report.

SKILLS

Technical: Python, Rust, SQL, R, Bash

Tools & Platforms: Git, Linux, Excel, SQLite, REST APIs

Languages: English — Fluent, Hindi — Fluent, Kannada — Beginner

CERTIFICATIONS & TRAINING

- HR Analytics — NPTEL (2024)
- Language and Mind — NPTEL (2024)
- Basics of Python — Infosys Springboard (2023)
- Python Foundation Certification — Infosys Springboard (2023)

CO-CURRICULAR & LEADERSHIP

IEREK CST 6th Edition Conference

2024

Accepted Abstract — “Rejuvenating Lakes in Bengaluru”

Vertical Head, BitOps — Labyrinth (CS Club, CHRIST University)

2025

- Led the vertical's events and operations.

Media Volunteer, CUIE

2025

- Produced video content published on the cell's official Instagram.

ACHIEVEMENTS & AWARDS

- Meritorious Scholarship — Scholarship and Fellowship Support Cell, CHRIST University (2025)
- Meritorious Scholarship — Scholarship and Fellowship Support Cell, CHRIST University (2024)

EDUCATION

CHRIST (Deemed to be University), Bengaluru

Expected 2027

B.Sc. (Honours) Computer Science and Statistics | GPA: 3.65/4 (equivalent to 9.13/10)

Indian Institute of Technology, Madras (Online)

Apr 2025

B.S. Data Science and Applications — Foundational Level

AECS Magnolia Maaruti Public School, Bengaluru

2024

Grade 12 | 94.8%
